

# Supplier A Agreement — Synthetic Demo

CAUSORA · SYNTHETIC SOURCE FILE · DO NOT USE FOR PROCUREMENT

THIS DOCUMENT IS SYNTHETIC DEMO DATA. It is not signed, enforceable or associated with any real supplier.

The fictional supplier and buyer use this sample solely to test quote matching, source-page links and contract-constrained decisions in Causora.

Version: demo-2026.10.04-r2. A separate synthetic notice register supplies the notice-sent assumption; this PDF alone cannot prove whether a notice was sent.

# Parties and scope

CAUSORA · SYNTHETIC SOURCE FILE · DO NOT USE FOR PROCUREMENT

Supplier A and Demo Buyer discuss a hypothetical 24-month supply relationship for DEMO-SKU-A. Names, amounts, dates and operational figures are fictional.

This sample is intentionally machine-readable. It does not include signatures, real counterparties, or personal information.

# Base pricing

CAUSORA · SYNTHETIC SOURCE FILE · DO NOT USE FOR PROCUREMENT

The synthetic base unit price for Supplier A is \$12.00 per unit, before any renewal uplift. Supplier B is shown in separate mock delivery history at a base price of \$12.60 per unit.

The Causora demonstration reports Supplier A purchase cost at the base price and the renewal uplift separately, exactly once, in the renewal premium component.

# Renewal and minimum purchase — evidence page

CAUSORA · SYNTHETIC SOURCE FILE · DO NOT USE FOR PROCUREMENT

If written notice is not received at least 60 days before renewal, the agreement automatically renews.

The agreement automatically renews for 24 months at a 14% higher unit price.

The renewed term has a minimum purchase commitment equal to 60% of forecast demand.

Early exit during the renewed term incurs a fixed termination fee of \$25,000.

For the synthetic scenario only, the renewal-cycle forecast is fixed at 26,000 units for the coming term.

The mock notice register supplies the explicit assumption that no timely written notice was recorded.

# Operational interpretation

CAUSORA · SYNTHETIC SOURCE FILE · DO NOT USE FOR PROCUREMENT

Scenario demand can fall after the forecast used for the minimum commitment was fixed. In the Day 1 stress preset it falls to 22,100 units; the contractual floor of 15,600 units from Supplier A remains unchanged in the demo.

This example is an interpretive assumption for a synthetic clause, not a legal determination. Real contract implementation requires counsel and source verification.

# Reproducibility notes

CAUSORA · SYNTHETIC SOURCE FILE · DO NOT USE FOR PROCUREMENT

The five evidence records EV-014, EV-019, EV-021, EV-024 and EV-027 all point to page 4. EV-019 and EV-021 intentionally share the same source sentence because two distinct fields are extracted from it.

For a live deployment, replace this document with an authorised, machine-readable agreement; verify every quote and, where possible, attach a PDF location rectangle.
